LEARNING FROM THE PAST

Cleaning up!

Step 2 – I imagine different situations and can bring them to life in different ways

sse | For a better world of energy

Knowledge Organiser

Energy can be generated in many different ways – these are called ***energy sources***.

Renewable energy sources use the world's infinite resources to generate energy e.g. wind, sun and moving water.

Hydroelectricity (water), ***wind power*** and ***solar power*** (sun) are all ways of generating energy.

Energy sources ***generate*** electricity, meaning they create energy. Wind turbines ***capture*** the wind to do this***.***

SSE have a ***vision*** for the future. This means they can think about or plan for the future.

If something is ***efficient***, it means it has the ability to do or produce something without waste.
