JOBS FOR THE FUTURE

Changing careers for changing times

Step 9 – I develop ideas by asking myself questions

sse | For a better world of energy

Knowledge Organiser

Solar power harnesses the energy of the sun to generate electricity. It is renewable as it will not run out.

Renewable energy sources use the world's infinite resources to generate energy e.g. wind, sun and moving water.

Hydroelectricity is where electricity is generated using flowing water. This drives a turbine which creates energy.

Collaboration is working with others to produce something. People ***collaborate*** to achieve a shared goal.

Sustainability explains avoiding overusing natural resources such as oil, trees or gases.

A ***specialism*** is a subject or occupation that someone knows a lot about and concentrates their efforts on.
