Greg Hawkins, Starling Bank

Amazon could become the third-biggest US bank if it wants to: Bain study

- Bain writes that Amazon's banking services could grow to more than 70 million U.S. consumer relationships over roughly five years, rivaling Wells Fargo.
- Amazon could evade more than \$250,000,000 in credit card interchange fees every year if it finds a bank willing to partner.
- The Bain report finds one-quarter of U.S. consumers would consider using the Amazon-branded Alexa would consider using the

Amazon may eventually have 70 million banking customers

They are coming fast!

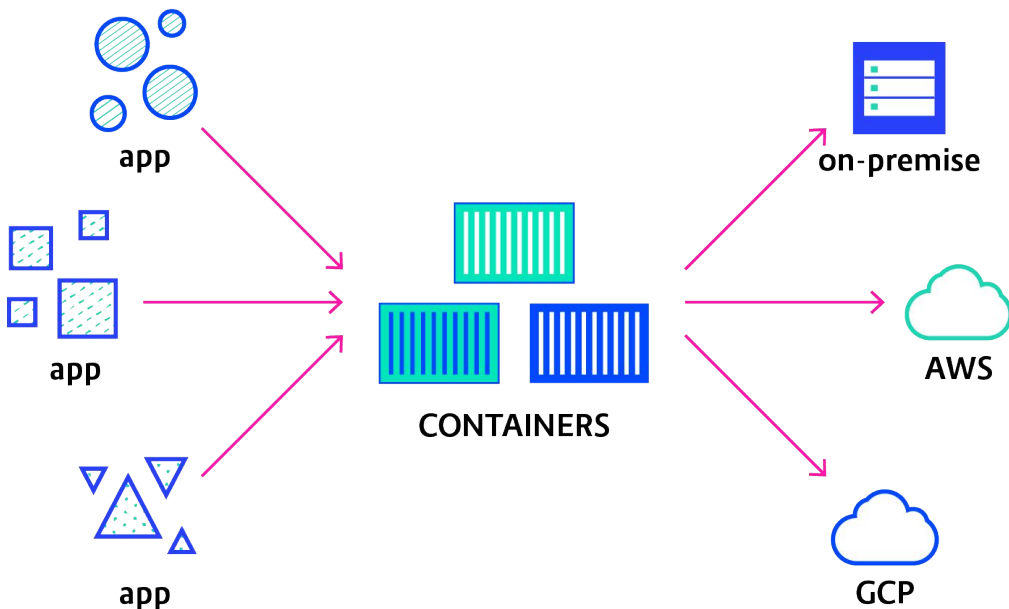

Why?

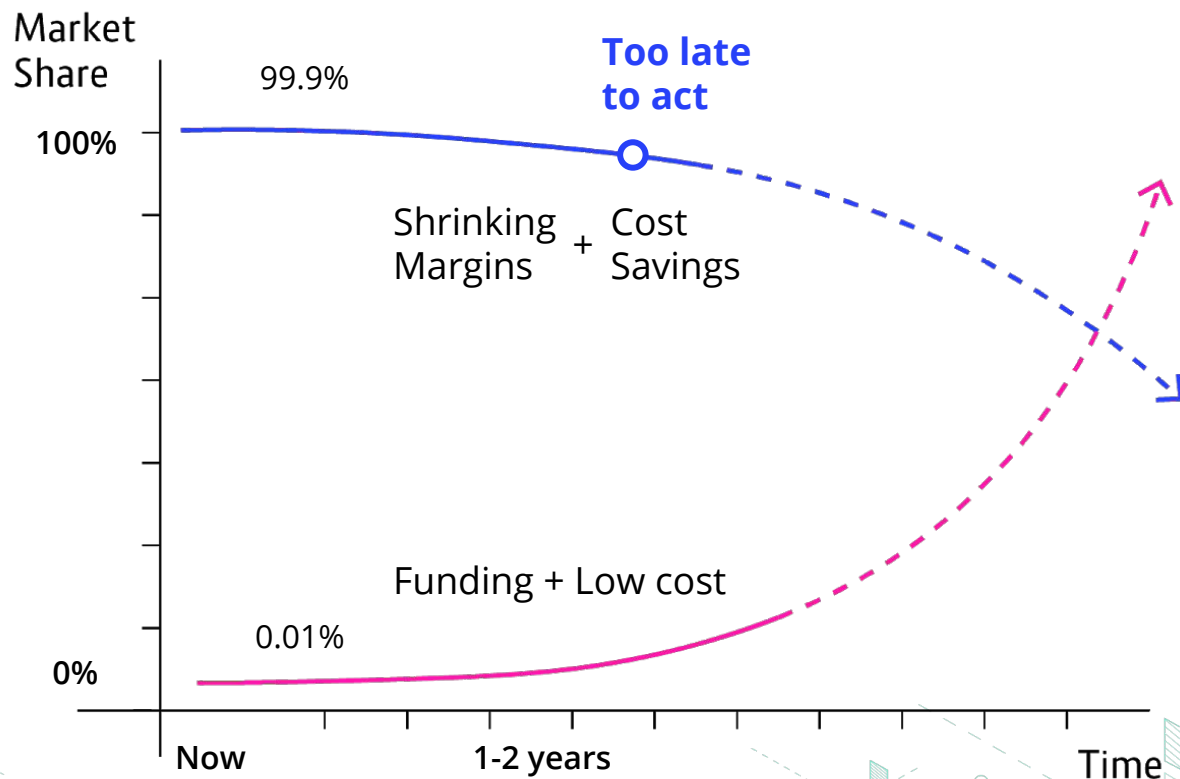

Because they deliver faster and more frequently by using modern technologies

Cloud Native

Public Cloud,
Microservices,
Containers (Docker),
Dynamic Scheduling
(Kubernetes),
etc.

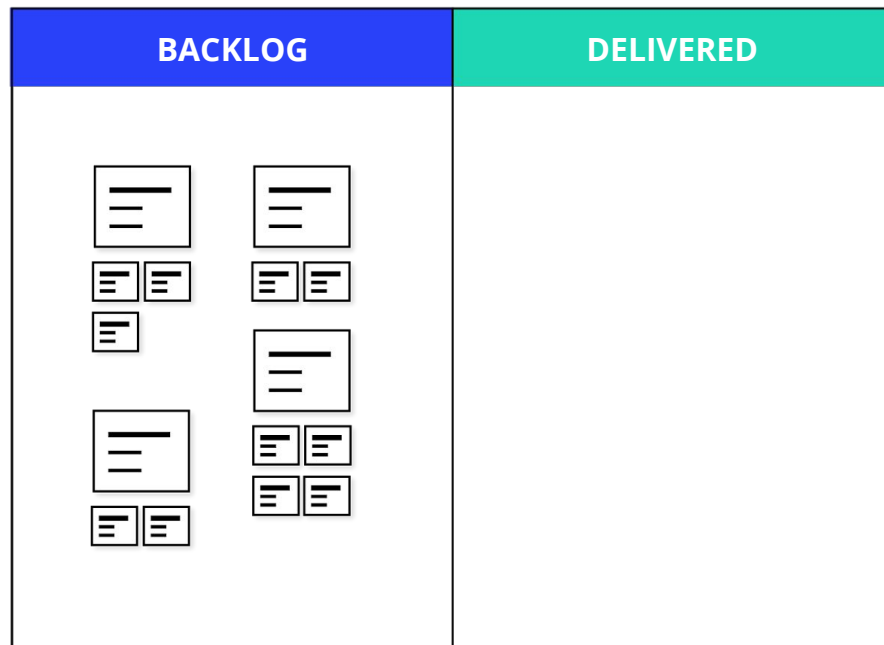

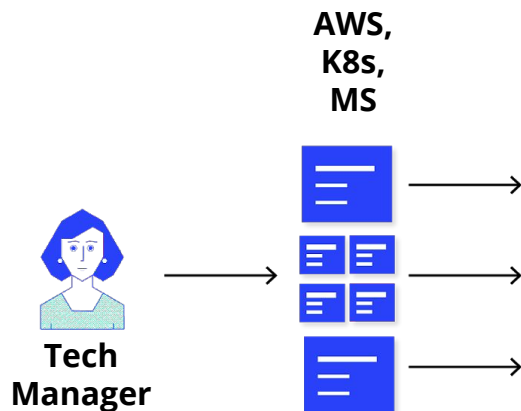

We Must DO Something!

Jenny's wakeup call

Use Cloud Native Tools

Engineering Team

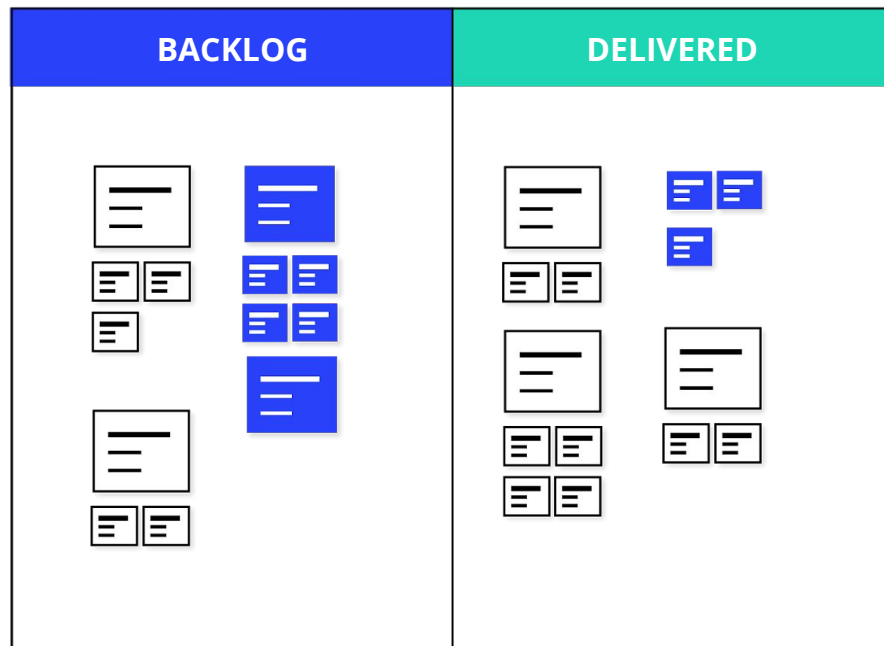

6-12 month later...

Only old stuff +
a bit of CN have
been delivered

Feature

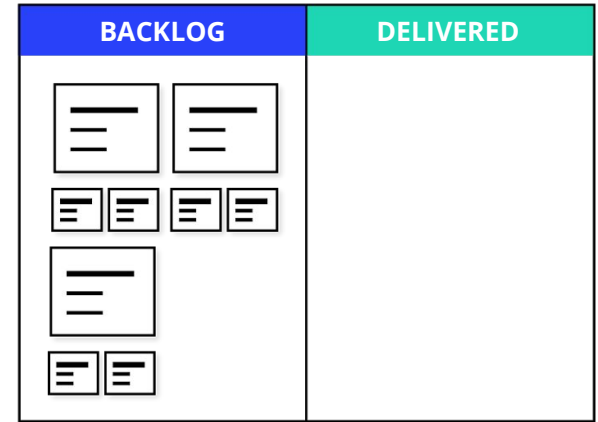

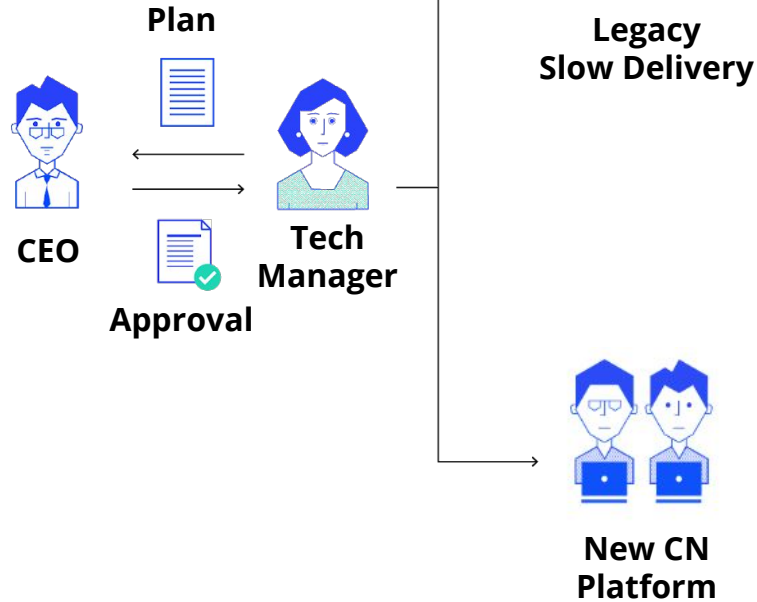

We Must DO Something ELSE!

Jenny's second wakeup call

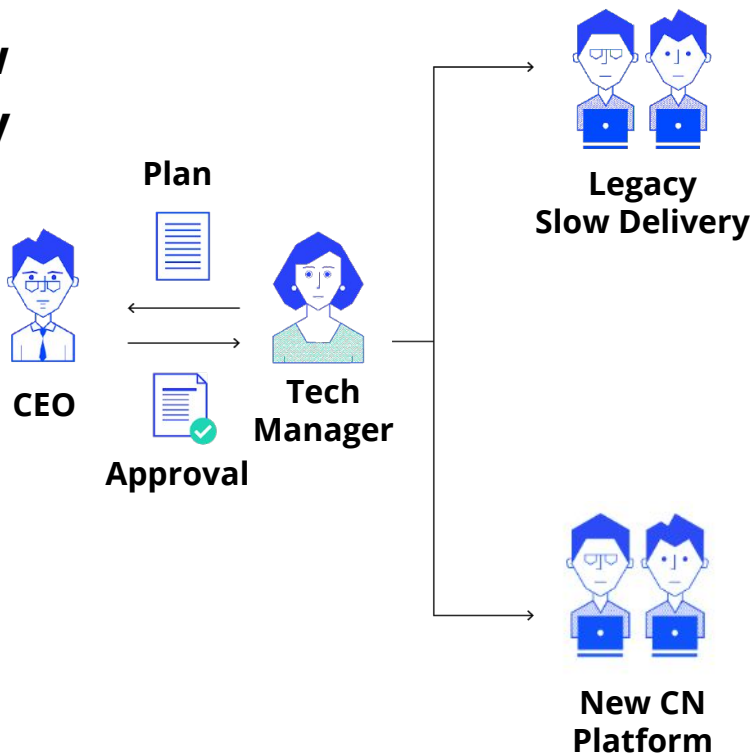

Cloud Native Rewrite

6-12 month later...

**Almost no new
features + only
30% on CN
have been
delivered**

Why is it so difficult?

Because - Cloud Native is New, Complex
and requires new ways of thinking!

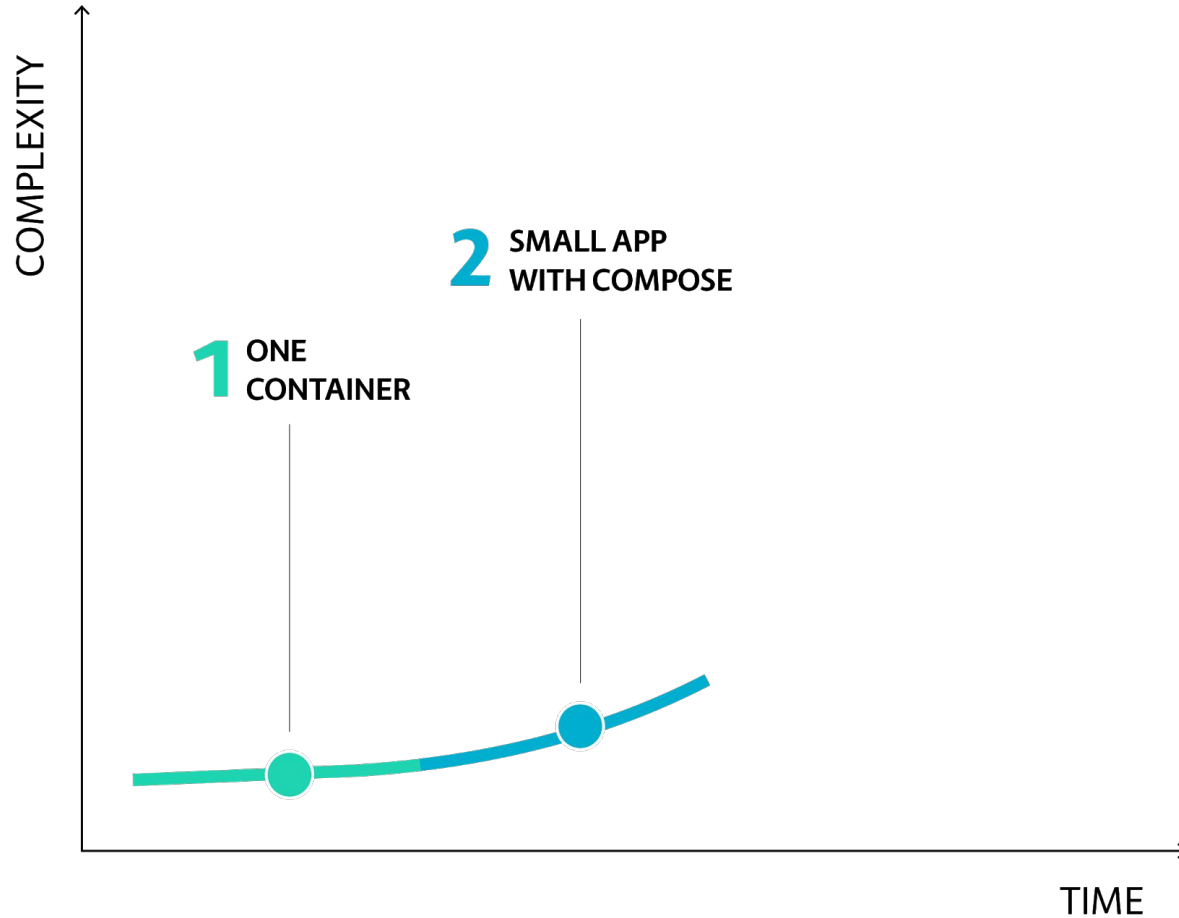

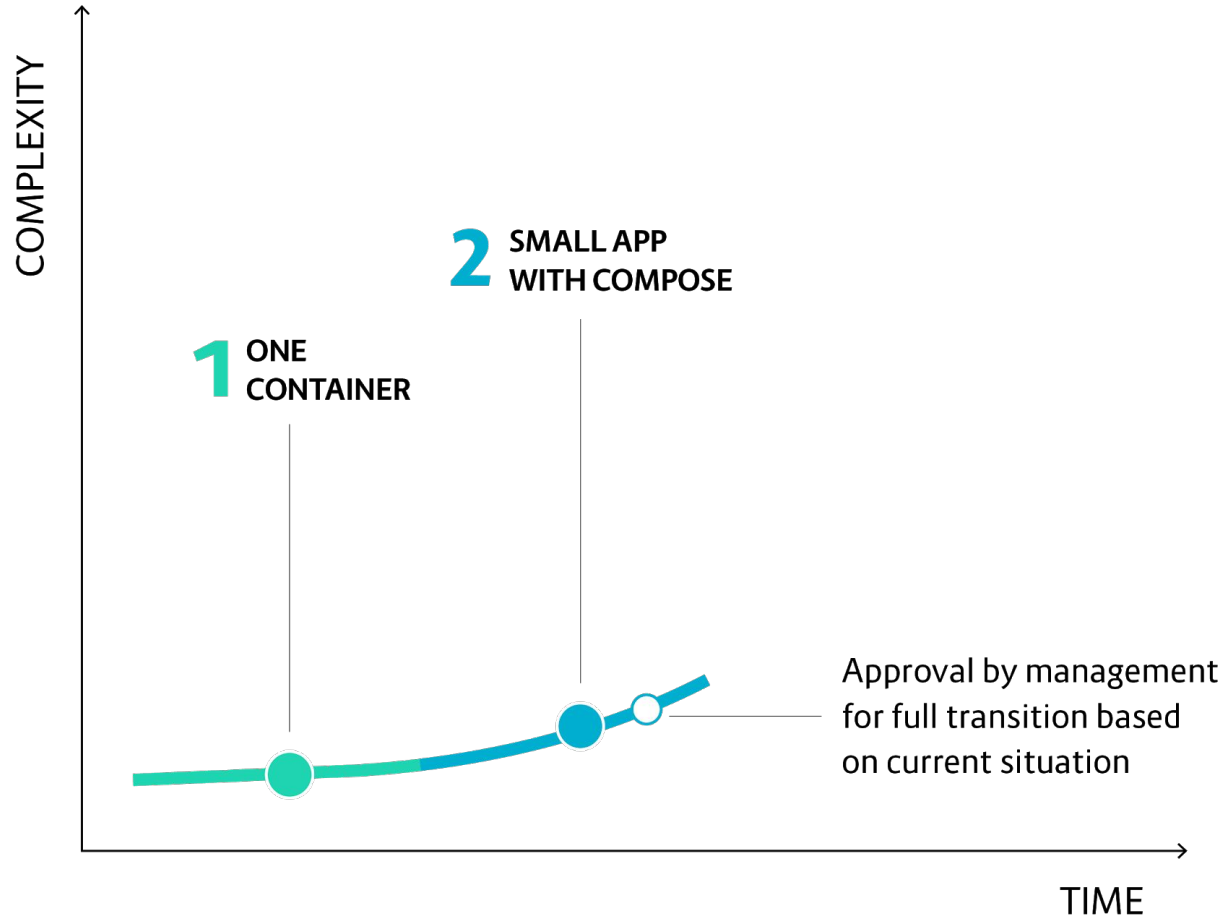

What is CNCF?

CNCF is an open source software foundation dedicated to making cloud-native computing universal and sustainable. Cloud-native computing uses an open source software stack to deploy applications as microservices, packaging each part into its own container, and dynamically orchestrating those containers to optimize resource utilization. Cloud-native technologies enable software developers to build great products faster.

Maturity Matrix

Stage	NO PROCESS	WATERFALL	AGILE	CLOUD NATIVE	NEXT
CULTURE	Individualist	Predictive	Iterative	Collaborative	Experimental
PROD/SERVICE DESIGN	Arbitrary	Long-term plan	Feature driven	Data driven	All driven
TEAM	No organization, single contributor	Hierarchy	Cross-functional teams	DevOps / SRE	Internal supply chains
PROCESS	Random	Waterfall	Agile (Scrum/Kanban)	Design Thinking + Agile + Lean	Distributed, self-organized
ARCHITECTURE	Emerging from trial and error	Tightly coupled monolith	Client server	Microservices	Functions
MAINTENANCE	Respond to users complaints	Ad-hoc monitoring	Alerting	Full observability & self-healing	Preventive ML, AI
DELIVERY	Irregular releases	Periodic releases	Continuous Integration	Continuous Delivery	Continuous Deployment
PROVISIONING	Manual	Scripted	Config. management (Puppet/Chef/Ansible)	Orchestration (Kubernetes)	Serverless
INFRASTRUCTURE	Single server	Multiple servers	VMs (pets)	Containers/ hybrid cloud (cattle)	Edge computing

The Ultimatum

We Must DO Something Else AGAIN!

Designs are Stories:

There is a square table with 4 chairs and a sofa in a room.

Vision First

Defining a guiding vision as very first step helps set the right path through an uncertain environment.

The company needs to define a clear and achievable vision, which will later be translated into specific executable steps.

In this context:

The combination of limited experience and lack of extra time and flexibility for research leads to pursuing CN implementation using “well known ways”.

- Without an overall consistent vision, different teams will make independent and, frequently, conflicting architectural decisions
- In many companies, Enterprise Architects are responsible for creating a detailed architecture. Many Enterprise Architects lack sufficient theoretical or practical experience in the Cloud Native approach.
- Agile methodologies, widely adopted in the contemporary business world, create pressure to produce results early and onboard teams to new systems very quickly.

Therefore:

You should define and visualize the architecture of the whole system upfront.

It can either be requested from external sources or uncovered by series of small research and prototyping projects ranging from few hours to few days each.

It's important to keep the vision high level to allow freedom of choice during implementation, yet also detailed enough to provide clear guidance (which will help avoid common pitfalls).

Consequently:

All teams have a clear guiding principle for the implementation phase.

The teams can start producing the lower level architecture, and translate it to the backlog of tasks. Therefore, Executive Commitment paired with leadership by the Transformation Champion are essential to have in place for successful vision creation.
